

## SOFTWARE IMPORTER README

This document outlines installation instructions for Kryptonik software importers. All Kryptonik software is copyrighted, trademarked, developed and licensed by Kryptonik, Inc. All Kryptonik software is distributed under license. View the license agreement for more information. Installation of this software package indicates acceptance of the license agreement. A full copyright notice is included at the end of this document.

### SOFTWARE REQUIREMENTS

The following requirements need to be met before running this import script: A Kryptonik software installation matching the Kryptonik software importer being used. I.e: An import using version 8 software data should be pointed to a version 8 installation.

### INSTALLATION SETUP

You downloaded an importer installation archive file from Kryptonik. The installation archive file will be named:

```
importer-{version}.zip
```

When you extract this file locally using a utility like WinZip (Windows) or unzip (Linux), it will create a directory named:

```
c:/unzipped/importer-{version}
```

This directory will include two files:

```
c:/unzipped/importer-{version}.php  
c:/unzipped/readme.pdf
```

### UPLOADING FILES TO YOUR WEBSERVER

You will need to upload the importer PHP file you extracted from the installation archive file. Upload this file to the Public Directory your software installation uses. Example:

```
/home/account/www/install/importer-{version}.php
```

### SETTING PERMISSIONS

After you've uploaded the importer PHP file from the installation archive file to the Public Directory on your webserver, you will need to ensure permissions are set correctly on that file.

For Unix/Linux web servers: Setting permissions on the importer PHP file in the Public Directory is done using your FTP client software. Simply highlight the file and choose to change its 'Permissions', 'Properties' or 'CHMOD'. If your

webserver requires PHP scripts to run with execute permissions, you will have to set a permission level of '755'. Otherwise you may not have to adjust permission on the importer PHP file.

For Windows webserver: You will not need to adjust permissions on the importer PHP file.

## **RUNNING THE IMPORTER**

After you've set permissions on the importer PHP file, access the importer script to continue through the import process. To access the importer script, simply open your web browser and browse to the location of the importer PHP script you uploaded earlier. Example:

```
http://www.yourdomain.com/install/importer-{version}.php
```

The importer script is an intelligent application that will handle the rest of the process for you and will provide you instructions as you interact with it.

## **REMOVING THE IMPORTER**

Remove the importer PHP script from your webserver account after completing your data import.
